**QUESTION 1**

A small videography business is requesting an internet connection that provides flexibility and is immune to electromagnetic interference over long distances. Which of the following is best suited for this situation?

- A. Cable
- B. Cellular
- C. Satellite
- D. Fiber optic

Correct Answer: D

---

**QUESTION 2**

Which of the following relational database constructs is used to ensure valid values are entered for a column?

- A. Schema
- B. Permissions
- C. Constraint
- D. Column

Correct Answer: C

Constraints are used to limit the data type such that, only the required data type is entered in a table, any other data action that violates, this is aborted. This helps to enhance reliability and accuracy of data entered in a table.

---

**QUESTION 3**

- A. Spreadsheet
- B. Flat file
- C. Network shared folder
- D. Database

Correct Answer: D

---

#### QUESTION 5

Which of the following statements BEST describes binary?

- A. A notational system used to represent an “on” or “off” state
- B. A notational system used to represent media access control
- C. A notational system used to represent Internet protocol addressing
- D. A notational system used to represent a storage unit of measurement

Correct Answer: A

While people find decimal easy to use, computers use binary to calculate and process information. Binary is a numbering system where each single digit can express only two values, in the range 0 to 1. The reason binary works well with computers is that these two values can represent the off/on states of the transistors that make up computer memory. Binary can also be referred to as base 2.
